TRACTOR AND CRANE COMBINATION IS THE PERFECT MATCH FOR UTILITY WORK

When leading Welsh Agricultural dealer David Evans Agri Ltd (DEAL) was approached by a customer for a bespoke tractor with a crane, they knew exactly which brand would provide the perfect solution.

Visiting the DEAL dealership one day, Mark Davis, head of technical and sales office at M&D Services in Port Talbot, spotted a customised tractor fitted with a crane in the yard – which had been built by David Evans previously – and decided that he just had to have one of his own.

“The tractor/crane combo in David’s yard was intended for forestry use and I knew I needed something bigger, so this was a new challenge for DEAL,” said Mark.

David Evans added: “For Mark’s Fendt 936 Vario tractor we fabricated and installed the mounting kit ourselves, making sure it was the perfect fit for the tractor. Building this for a customer was a bit of an experiment so we knew that it was important to have the back up of the importer of a high-quality crane. That’s why I went to Palfinger UK.”

The bespoke fitment from

DEAL goes even further by enabling the user to detach the crane and auxiliary leg stabilisers when required, so that the tractor can be used with or without the crane, or with other implements as required.

Rear mounted on the tractor, the medium duty Palfinger PK 19.001 SLD5 has a 4-extension C boom with lifting capacity of up to 18.5 tonne metres and an 12.6-metre reach. The lightweight design from Palfinger enables higher payloads than other cranes of a similar size, making the PK 19.001 SLD5 ideal for the wide range of heavy lifting tasks which Mark often undertakes. Additionally, the front and rear additional Palfinger stabilisers offer Mark both increased stability on the frequently uneven terrain around his home patch in South Wales, as well as extra support for heavier loads, enabling him to lift and move larger items quickly and easily.

Les Drage, Head of Technical and Sales at Palfinger UK, detailed the work put into the project by the Palfinger UK team. “This was a special project with a significant amount of bespoke work needed to harmonise the mechanical, hydraulic and

TRACTOR AND CRANE COMBINATION Continued from front page

electric interface work before the unit was sent out from Palfinger UK in Devizes.

"Extensive liaison and support was provided initially from the area sales manager Stuart Wilson, as well as from Project Engineers Rob and Gary to the team at David Evans Agricultural Ltd, while on-site stability testing was carried out by Steve in the Palfinger UK Service department before final handover. We're pleased with the outcome and we enjoyed working with David and his team."

"I intend to use the tractor in my work with utilities providers mostly," said Mark. "In the countryside around South Wales these companies often need to install poles, pipes and cables in areas which truck-mounted cranes can't reach - such as through fields or down tracks. My tractor mounted crane solves the problem and will open up more opportunities for me in those areas of work."

The 936 Vario itself delivers up to 366hp from a 7.1 litre Deutz turbocharged diesel engine; combined with the strength and power of the Palfinger crane it adds up to

an impressive machine for M&D Services.

Speaking of the build, David is keen to work on other bespoke jobs in the future. "This really is a specialist piece of kit and sort of a prototype for us really. We think it's gone very well and we're certainly interested in working on similar projects in the future with Palfinger cranes. Our facilities here at DEAL are perfect for managing these sorts of projects and my team is always ready to help provide solutions for our customers."

On his experience working with the Palfinger UK team, David has nothing but praise. "The Palfinger UK team has been great. Project Engineer Rob was very helpful, coming out to support with the crane fitment and was always available on the phone to answer questions and provide guidance throughout the build."

If you have a crane configuration in mind that you would like to discuss please do call Palfinger UK on 01380 722381, or take a look at www.palfinger.co.uk. To find out more about David Evans Agricultural Ltd visit www.dealwales.co.uk.

MACHINERY IMPORTS

BIGGER PRESENCE AND A NEW SPIDER AT SALTEX 2018

Once again the Machinery Imports team is excited to host a stand at the upcoming SALTEX event at the NEC in Birmingham, promising an even bigger and better presence this year in line with the exciting growth the business is seeing both through sales and personnel.

With a stand space of 175m², almost 50m² larger than the two award-winning 2017 stands combined, the team will be showcasing the range of innovative machinery available now and in the future from leading brands Ferris, Wright, Spider and Jensen.

Displaying all four brands together in one space not only helps the growing team to work closely together to support visitors to the stand, no matter their machine of interest, but also enables interested parties to see the full line-up available from Machinery Imports including pedestrian, zero-turn ride on, stand on and robotic mowers, as well as a wide range of woodchippers that can be bought in PTO, tracked, towed or specialist formats.

Launching at the show this year will be the brand-new innovation from Spider, the X Line, which builds on the success of the ILD01 and ILD02 models whilst boasting a

The new Spider X line will be launched at Saltext.

compact size, the ability to mow on slopes up to 55° with an integrated winch and productivity equal to three operators with strimmers. Visitors to the show will also have the chance to see firm favourites from the existing range including the ILD01 and larger ILD02 model.

To highlight the industry-leading, patented suspension available on the Ferris range of mowers, there will be a dynamic display showing just how that works in practice, and members of our team will be pleased to discuss the benefits that users realise from riding a Ferris mower. Also on display will be a range of Ferris models of various sizes including the 400S, the smallest ride-on mower in the line-up, introduced in 2018.

DAIRY

THE ROTARY MILKING PARLOUR THAT REVOLVES AROUND YOU

The latest-generation rotary milking system from DeLaval, the E100, is not just a rotary, but a full system with more information, more automation, more functions and more technology than ever before. Above all, it has been designed so that one person can operate everything safely, comfortably and easily, from a central point.

Building on years of experience with rotary milking systems, DeLaval has designed the new E100 to create a better, safer, calmer and more productive experience for you, your cows and anyone who works on your farm.

Featuring easy entry and easy exit for cows, TopFlow clusters that can milk up to 15 litres per minute, plus DeLaval's special design of comfort bail, the Rotary E100 is operated from a 'cockpit' where all aspects can be monitored and controlled via the DelPro platform and touch-screen.

Unique to the E100, the ComfortBail is fundamental to maintaining efficiency as well as a calm milking environment for the cow. All the necessary wires, pipes and technology are integrated within the bail, thus ensuring clearer lines of visibility for worker and cow, easier, safer access for the milker, and a more consistent approach to the task of getting cows on, milked and gone, quickly and without stress. The design also ensures that the cows present ready for milking in a position that makes attachment faster and simpler, while four individual teat spray nozzles provide accurate coverage seconds after cluster removal.

DeLaval's FastLane entry bridge

DeLaval's new E100 rotary milking parlour improves conditions and reduces labour requirements.

ensures that the cows move as quickly, calmly and efficiently as possible, enabling the operator to select either single cow entry or a one and a half cow entry lane to optimise the number of cows per hour of milking. The wide exit lane incorporates a funnel enabling multiple cows to exit the milking parlour, thus reducing the number of inactive milking points and increasing throughput without creating platform stoppages.

Clear and open bail for easy entry and cow 'flow'.

Low profile improves sight lines and cow comfort.

With herd sizes increasing, it all adds up to milking more cows more efficiently with fewer labour hours and less hassle.

T H WHITE can not only supply and install the new DeLaval E100 - plus a building and all associated works to house it in if required - but once it's in production we can provide all the support and service you will need to maximise the profitability of your dairy operation.

Get all the facts by calling any of our Dairy branches, or talk to T H WHITE Dairy Manager Nigel Ellis on 01373 465941, email nigel.ellis@thwhite.co.uk.

KEEPING YOU SAFE & SECURE

Access Control systems

From simple pinpad and swipe units to fingerprint biometric entry modules we can control access to any size of property, including those with restricted areas or secure rooms.

Intruder Alarms

From bells only to fully policed, monitored systems. We can install the right system tailored to you or your insurance company's requirements. Already have a system? T H WHITE can carry out your annual tests, with a friendly face and a service you can trust.

Fire Alarms

Business owner? Landlord? Health and safety manager? Our surveyors are fully accredited in system design and can work with you on any project to make sure you comply with the latest regulations.

Fire Extinguishers

We supply and maintain fire fighting equipment, and offer advice to keep you safe and compliant with the latest regulations. We also offer safety signage and accessories such as cabinets, vehicle boxes and escape ladders.

CCTV & IP Cameras

For security, health and safety or machinery monitoring, we have the system for you. From fully HD conversions of existing systems to IP set ups we can future proof your CCTV installation. Coupled with our smart phone technologies you can monitor your system from anywhere in the world.

Electric Gates & Barriers

From bespoke domestic style electrical gates to commercial barriers and bollards. Physical security combined with security systems enhance the protection of sites and stop would-be intruders in their tracks.

ENERGY, FIRE & SECURITY

ALARMS GO IN WHILE SCHOOL'S OUT

Over the school summer holidays the T H WHITE Energy Fire and Security Division was operating at full capacity installing fire systems in five Wiltshire schools.

In total, there were four complete new systems as well as an extension to an existing system. In total over 1,300 devices were installed over the six-week break.

The equipment used included conventional addressable alarm panels with heat and smoke detection and one large system included a complete replacement with a new wireless system.

You might ask why one system was wireless and others were wired? The answer is that both solutions offer benefits. Wired solutions are traditionally seen as more resilient and require less maintenance, whereas wireless systems require battery changes every few years. There are, however, practical and capital cost advantages of using a wireless installation in certain circumstances.

In the case of the school where we installed a wireless system, the design of the building meant that retrofitting a wired fire alarm would prove very costly and so wireless offered a better practical solution to avoid running cable; it was also installed in half the time of an equivalent wired system.

Another feature of one of the new installations was the use of multiple alarm sounds to alert pupils to either a fire emergency, a safety lockdown at the school, or to signal a class change. This was achieved by using a wired, addressable fire panel.

T H WHITE has more than 25 years' experience in installing fire and security systems and has the capability to handle projects of all types and sizes. Call us on 01380 726656 or email alarms@thwhite.co.uk for more information.

GENUINE WIEDENMANN TINES FROM £4.49

We sell genuine tines from Wiedenmann for any Wiedenmann aerators, priced from £4.49 depending on size and length.

These tines will fit perfectly into the aerator tine holder, preventing damage to the machine and avoiding additional costly bills to replace broken tine holders.

Replace your tines with genuine Wiedenmann parts quickly and easily, reduce downtime and ensure that your aerator is kept in action all season.

AGRICULTURE

MULTI FEEDER OFFERS

The Logic trailed Multi Feeder saves time, improves conditions for the stockperson as well as the profitability of livestock enterprises. Originally designed for sheep, the versatility of the design allows other livestock to enjoy the same benefits.

The trailed unit allows the use of bulk feeds (eg. nuts, rolls, pencils and larger cobs) when required. It handles most home mixes, even whole grain with minerals added.

Feeding can be carried out quickly with minimal disturbance to the animal group which can be a significant benefit when sheep are heavily in-lamb or animals are in a sheltered area during poor weather.

The Multi Feeder is simply switched on without the need to stop. It has a drop counter system which opens and closes a shutter leaving a calibrated amount of feed so that feeding can begin without bunching up and stress. Livestock very soon realise that feed is only available when the shutter starts to operate. Once feeding is completed and the sound of the shutter stops, normal inspection can be carried out without being followed.

A clean area can be selected each day for feeding and if necessary the operation can be interrupted to avoid wet ground or to move closer to another group of animals. There is no need for costly and labour-intensive feed troughs, eliminating associated feeding problems and badly poached areas around troughs.

Two **SPECIAL OFFERS** are available from T H WHITE Agriculture until 30 November 2018. A 'package' offer comprising the Logic LMF570K 365ltr feeder, Tonneau cover, mudguards and livestock fender on 22x11x8 wheels and tyres with resettable counter represents outstanding value at £1,650 plus vat. Alternatively the Logic LMF870K on larger 25x10x12 wheels (as pictured) is available at the offer price of £1,800.00 plus vat.

For further information please contact Simon Knight on 07860 712963 or Tim Rochfort on 07973 911934.

PROJECTS

CREATING A CLEANER, SAFER AND HEALTHIER ENVIRONMENT

The remarkable dust suppression hopper, launched in England and Wales by T H WHITE a few months ago, is already proving to be an extremely efficient aid in creating a cleaner and safer working environment wherever powdery, granular or other free-flowing materials are handled.

Since the launch, the T H WHITE Projects team has been in contact with decision makers in key industries – including the agricultural and cereal milling and processing sectors, port operators, chemical plants and mining and quarrying operations – where dust control is an ever-present challenge.

Simple in design but highly effective, the dust suppression hopper takes the form of an easily-installed loading spout, designed to be mounted immediately beneath an existing feed point. It's ideal for use where free-flowing products need to be packed, bagged, or loaded into ships, railway wagons, trucks, silos or storage bins. It works by funnelling material through a restricted orifice and cone, causing it to adopt a swirl. As the material exits the nozzle a combination of surface tension, compression and the induced vortex holds it together in a tight, highly controlled stream which contains dust within the column.

It really does work and the photos show it in action, but to show you just how effective it is we can arrange a trial with your particular application.

One company in the feed milling industry undertook a trial using one of our demonstration units and recorded a significant reduction in dust emissions, after which they proceeded with an order. Andrew Workman, head of business development at T H WHITE Projects, said: "We have been most impressed by the initial response from the market to this innovation. Like our clients, we are confident that as the installed units become operational they will deliver significant environmental improvements leading to healthier and safer conditions.

If you are interested in arranging a live demonstration of the T H WHITE dust suppression hopper just call us on 01380 723040 or email projects@thwhite.co.uk. T H WHITE Projects also specialises in cereal processing and storage solutions of all sizes, from small farm installations to large commercial or industrial bulk facilities, taking each project from conception to completion, so if you have a scheme you would like to talk about please do get in touch. Our specialists will be pleased to advise and guide you to the best and most effective solution.

GROUND CARE

Iseki SXG326

Probably the most useful piece of kit for anyone responsible for mowing private or commercial grounds, parkland or sports facilities is a tough and super-reliable ride-on mower, and they don't come any better than Iseki cut and collect machines.

More than 80 years experience in the design and manufacture of mowers and tractors has given Iseki the know-how to deliver compact and mid-size machines that professionals can rely on. High performance and operator comfort, together with the ability to work efficiently all the year round, in all weathers and on all types of terrain, adds up to a winning combination.

At the compact end of the range the Iseki SXG216 is the perfect solution for home owners who want an easy-to-use mower that cuts and collects in the wet like no other. Despite its smaller size its diesel engine gives it plenty of power and it has a 320-litre collection capacity with blower-less collection, plus a hydraulically assisted tipping collector which is easily removed.

Stepping up a notch, the highly popular Iseki SXG323 features a 48in-wide witting deck with dial-in height adjustment, matched by an 1123cc 19hp diesel engine offering a great balance of power and fuel efficiency.

Larger again is the Iseki SXG326 with a 54in mower deck, an impressive

ISEKI
CUT & COLLECT

Iseki SF450

600-litre collection hopper and high dump as standard. If you want to combine your mower with all the benefits of a small tractor, The Iseki TXG237 is robust enough to take a front loader, back hoe or other implements via a Cat 1 three-point hitch. Its independent PTO, switchable 4-wheel drive and high ground clearance make it suitable

for many other duties too. When you have a lot of grass to cut the Iseki SZ330 offers a choice of a 60in or 72in width of cut, but it's also a zero-turn mower, making it highly manoeuvrable for getting into tight spots.

For ultimate high productivity the Iseki SFH240 would be hard to beat. It has an out-front rotary with counter-rotating blades which will cut in all conditions, coping particularly well with

Iseki SXG216

long, wet grass. The high-dump hopper has a clearance height of 1,900mm, but the SFH240 can also be supplied as a mulching machine without the blower and collector.

The big daddy of Iseki mowers is the SF450, a large capacity, centre-collect rotary mower with a 60in deck and 1,300-litre hopper, plus a powerful 46hp diesel engine.

There's an Iseki cut and collect mower for almost every application. You can find out more or book a demonstration by contacting any T H WHITE Groundcare branch.

AGRICULTURE
GOING GREEN

With the shooting season upon us, green is often the preferred colour for an ATV.

So just a reminder that T H WHITE can now supply Honda models TRX500FM6 Foreman and TRX420FM2 Fourtrax from stock in the lovely Honda green. There is also very limited availability of the TRX500FA6 Foreman Automatic in green.

For further information please contact Tim Rochfort on 07973 911934 or Simon Knight on 07860 712963.

GROUND CARE
WINTER SERVICE
DISCOUNTS
2018-19

10% OFF LABOUR
10% OFF PARTS
For orders placed before 30 November 2018

Book in your groundcare machinery for servicing in the quieter winter months to take advantage of our discounts.

Servicing your machinery in the winter months when the pressure is less will give you peace of mind that your machinery will be ready to go in the 2018 season. Because it also allows us to plan our workload it enables us to offer you worthwhile discounts. To qualify for the discounts, servicing must be booked before the end of November this year.

To make a booking, or to find out more, please contact your T H WHITE Groundcare branch.

Terms & conditions apply to all Winter Service bookings.

BOOK YOUR SERVICE BEFORE THE END OF NOVEMBER AND WE WILL ENTER YOU IN A PRIZE DRAW TO WIN A LUXURY CHRISTMAS HAMPER!

The winner will be drawn in the first week of December.

Terms apply – available on request
