NO INTEREST FOR THE BEST?!

The new season is focusing thoughts on getting the right kit for the year ahead, and when it comes to tractors one of the best all-rounders is the Case IH Puma series. Now, and until the end of February, you can purchase any Case IH Puma from TH WHITE Pro Agri with **0% FINANCE PLUS 3 YEAR, 3,000 HOUR EXTENDED COVER with a maintenance contract.**

0% finance for Case IH Puma

The Case IH Puma offers a clear-view driving position and the Multicontroller (below) offers fingertip control of all functions

specification or one with advanced technologies, there's a Puma to suit and all of them have been designed for intuitive use by people who really understand farming. The multicontroller armrest puts finger-touch control of all functions right under your hand, a tractor performance monitor is located in the right hand 'A' post and the AFS Pro 700™ Touchscreen monitor

provides a clear overview.

The entry level Puma X benefits from a 40kmh semi-powershift transmission with six clutchless changes and on multicontroller models full powershift is a further option. CVX models offer seamless travel from standstill to 50kmh, which is achieved at a fuel-miserly 1,500rpm. Four PTO speeds are available at the rear, with the option of a 1,000rpm PTO at the front and powerful hydraulics that are able to handle the heaviest implements.

If you have never operated a Puma before, now is the time to climb up into the driver's seat.

Remember that the 0% finance offer expires on 28 February so don't delay – call our Pro Agri team at Frome or Stockbridge today for all the details and conditions.

Built in Austria, the 15 Puma models from 140-240hp are available with a range of transmissions including a proven semi-powershift, full powershift and CVX (Continuously Variable Transmission) combined with the latest FPT engine technology, offering ideal solutions for every arable, contracting and livestock application. All the Puma models are not just tough, practical machines – they are also a nice place to be when you are spending long days in the driving seat. Noise levels are kept to a minimum thanks to insulation and a carpeted floor, while auto climate control keeps you cool when the heat is on. The driver's seat is both heated and ventilated, with an adjustable lower cushion, and cab and front axle suspension is available for the perfect ride.

MACHINERY IMPORTS

DEVON TO SCOTLAND: JENSEN ALL THE WAY!

Momentum continues to grow behind the Jensen brand this year with the appointment of another brand-new dealer in the South West.

Elmstar Machinery, based in Newton Abbot, will be responsible for sales, service, parts and hire of Jensen woodchippers throughout the entire county of Devon. Elmstar, which celebrated its 10th anniversary in January represents a strategic addition to the Jensen network.

Jason Wignall, Elmstar Machinery co-owner, is extremely pleased with the new partnership and is very excited to have the opportunity to work with the premium brand that is Jensen. "We do sell a range of domestic and professional groundcare machinery, as well as chainsaws, but the adoption of a woodchipper brand opens up new and exciting potential for us in the arboriculture sector across Devon. We are delighted to be able to add this established brand to our portfolio."

This latest appointment comes hot on the heels of two other new dealership appointments in the UK, with Field and Forest Machinery, Scotland and P Tuckwells in the East of England both joining the Jensen dealer network in November 2018, and another in Kent coming very soon.

Jensen chippers are now available to buy and hire from 19 dealer locations across the UK each dealership also offering service and parts. The fact that Jensen is going from strength to strength is evidenced by the exceptional growth in sales and brand awareness throughout 2018, only the second year of trading as part of the T H WHITE Machinery Imports division and led by business manager Bill Johnston. "2018 was an excellent year for Jensen," said Bill, "with a growing network of dealers across the

Jason Wignall of Elmstar, Newton Abbot, with Bill Johnston.

country, a series of successful events in the Arb Show, APF and SALTEX, and increasing awareness across the industry of the world's original woodchippers which have been made by Jensen since 1884.

"2019 is already looking like another exciting year, with even more high calibre dealers set to represent Jensen and we are delighted to welcome Elmstar Machinery into our Jensen family, we are confident they will provide exceptional customer service and support for all things Jensen for our Devon customers."

You can see the full Jensen range at www.jensenchippers.co.uk and if you are interested in joining the growing Jensen dealer network please call T H WHITE Machinery Imports on 01264 811260.

Welcoming Tom Brown of Field & Forest, Scotland.

ENERGY, FIRE & SECURITY

TRIO OF LOCAL AUTHORITIES CHOOSE T H WHITE FOR EV

The phenomenal growth in the uptake of electric vehicles – and the consequent need for charging point installations – has led to T H WHITE being awarded three contracts from local authority clients for installation of vehicle charge points across England and Wales with manufacturing partner Swarco.

The T H WHITE Energy, Fire & Security team began work on site for Oxfordshire County Council in preparation for the council's planned programme of electric vehicle infrastructure. Hard on the heels of this success came similar contracts from Basildon & Rochford and Cardiff Councils. Charge points will be installed across these areas which are sure to be the first of many thousands that will appear in the next few years.

Electric vehicles are at the heart of the Government's ultra-low emission vehicles policy and it is projected that between 9 and 12 million electric vehicles will be registered by the 2030s. Businesses we speak to are keen to reduce carbon emissions from their fleet costs, attract quality staff with their green credentials and improve air quality where they operate.

T H WHITE offers a full range of charge points, from simple residential installations to fast and rapid charge points for commercial use. T H WHITE is also registered to offer grants to homeowners and businesses for each qualifying charge point installed. Call 01380 726656 or check our new website, efs.thwhite.co.uk.

LORRY CRANES

GIBSONS MARK 40 YEARS WITH TWO CRANES

The Palfinger UK team was delighted to hand over one of two new crane builds in January to long-standing customer, Gibsons of Kendal.

Representing a major investment for the family-run Gibsons business, the latest delivery comprises a Palfinger PK 78002 SH D crane with flatbed body,

mounted on a new generation Scania R500 8x2 truck. This is the ninth Palfinger crane for Gibsons, with a second, identical truck due in Summer 2019, taking Gibsons into double figures with Palfinger.

Gibsons specialises in large haulage services in the UK, with a modern fleet of vehicles to perform a wide variety of tasks. As well as celebrating the delivery of the new vehicle, Gibsons are proud to be commemorating the 40th anniversary of their business this year.

Their new Palfinger PK 78002 SH D high performance crane offers a lifting capacity of 4850kg at 13.7m full extension, perfect for the heavy lifting jobs that are part of the everyday activity for the Gibsons team.

The build comes with Palfinger's High Performance Stability Control (HPSC) system. Sensors for proportional path measurement are placed in the stabilisers, making their positioning fully variable and enabling quick calculation of all permissible working ranges for any slewing angle and stabiliser position. This ensures maximum flexibility and productivity when the crane is in use, with the widest possible working range and maximum lifting capacity, as well as

increased safety for all involved.

Gibsons of Kendal owner, Ray Gibson, is pleased to have taken delivery of his newest vehicle. "This is our ninth crane and vehicle from Palfinger UK – previously T H WHITE Lorry Cranes – and we have yet another crane vehicle on order for Summer 2019," he said.

"Our vehicles are used for a variety of applications including transporting water turbines, electric panels, transformers, cabins, containers, gate houses, generators, camping pods and even art sculptures. We've always found that Palfinger cranes

to be extremely reliable and capable of heavy lifting tasks, especially in challenging situations. Using high quality Palfinger cranes keeps us ahead in our business and our customers satisfied."

Palfinger UK area sales manager Scott Dunn worked alongside Ray, his son and co-owner Chris, as well as the technical and workshop staff at Palfinger UK to ensure Gibsons received the perfect crane for their needs. "We cooperated very closely with Gibsons of Kendal for a number of months on these particular new builds, designing the specification meticulously to meet their exact requirements. We are all very pleased with the finished result, and are confident that the new addition, alongside its partner arriving later in the spring, will complement Gibsons' existing fleet of Palfinger cranes. Everyone at Palfinger UK would like to thank Gibsons of Kendal for their continued business and wish them all the best in their 40th anniversary year."

Palfinger UK Area Sales Manager Scott Dunn with Gibsons of Kendal owners Ray and Chris Gibson.

AGRICULTURE

PRECISION, HIGH SPEED PLANTING FOR INCREASED YIELD AND PROFITABILITY

Väderstad Tempo T 6-7

In today's cost-conscious arable farming environment, speed and precision can make a huge difference to yield and profitability.

When it comes to achieving the most when drilling and planting, our experienced team is always ready to help you find the best specification to meet your targets and address your challenges. We are not just here to sell things, we are standing by to help you grow your business, now and for generations to come.

To help you be sure you are choosing the right kit we can arrange pre-season demonstrations, and with some great finance offers available it's a perfect time to consider the options. We start the season by looking at two outstanding machinery offerings from Väderstad and Kuhn.

Rapid Tempo from Väderstad

The Väderstad Tempo is a new generation high-speed planter, designed to deliver exceptional precision at double the speed of traditional planters. No-till, min-till or conventional tillage – Tempo performs exceptionally in all conditions.

Traditional planters allow the seed to fall freely through the seed tube from the seed meter down to the soil. When vibrations arise as the speed increases, the seed bounces in the seed tube and much of the precision of the seed meter

Precise monitoring with Väderstad E-Control

is lost. The Tempo has a pressurised Gilstring seed metering unit which uses air pressure to maintain full control of the seed all the way down to the soil; removing gravity from the equation means that vibrations or slopes don't affect the precision of the seed metering, so speed is not an issue.

Taking high speed planting to the next level has also involved addressing the issue of skips and doubles. Skips in the rows mean fewer yield-bearing plants at harvest time. However, doubles can be equally detrimental. Plants that are too

Väderstad Tempo F 8

close together compete for sunlight and nutrients, resulting in uneven maturity and reduced yield. Using Tempo will ensure the same conditions for all plants, with consistent plant spacing resulting in a crop that matures at an even rate and is more likely to yield to full potential.

Excellent in all crops

The small seeds kit, which includes suspended stop wheels and the ability to adjust the angle of the closing wheels, ensures great results when planting small seeded crops, such as oilseed rape and sugar beets. This improves yields and extends the applications of the high-speed planter.

Whatever the crop – maize, sugar beet, soya beans, sunflower, oilseed rape, cotton, sorghum and many more – Tempo can plant a full range with

excellent results. The row spacing and machine setup is easy to change for different crops and the result is increased efficiency and minimised machine costs per hectare.

There are five models of Tempo in the range with mounted machines from 4-12 rows and trailed machines from 6-24 rows. All the Tempo models offer a fertiliser option whether mounted to the machine or using the Väderstad FH2220 front hopper.

Full control at your fingertips

An iPad-based control system, Väderstad E-Control wirelessly delivers data about each seed that travels through the machine, including seeding quality, skips, doubles, distance in the row, and rate. You benefit from user-friendly remote set up and calibration, as well as easy, real-time monitoring and control.

Kuhn Maxima 3

Kuhn Farm Machinery has launched a new Maxima 3 range generation of precision seed drills. Available in 6 to 12 row versions and capable of drilling maize, sunflower, beetroot, sugar beet, peas, beans, onions and other crops with row spacings from 37.5 to 80 cm, the range comprises 12 models in configurations including telescopic, trailed, foldable and telescopic with adjustable spacing.

The Maxima 3 drill uses an improved seed selection and ejection system which enables accurate seed placement at working speeds of up to 10 km/h. A new coulter pressure system, delivering up to 180 kg of downward pressure also augments seeding accuracy by ensuring consistent depth control. An electrically-driven seed metering system allows application rates to be adjusted manually on the move.

The Maxima 3 can be controlled via Kuhn's intuitive KMS 548 control panel, and is also compatible with Kuhn's Isobus CCI 50 and CCI 1200 terminals, the latter allowing two different control interfaces to be viewed simultaneously on the same screen.

Each of the seeding unit's settings (depth, ground pressure, furrow closing, etc.) can be adjusted easily and quickly by hand and without the need for any specialist tools. This not only makes setting the machine up more efficient, but also cuts time spent on maintenance. We can also offer growers targeted cultivation solutions using the Kuhn Striger strip tillage cultivator. This incorporates an opening disc which prepares the way for the tine, followed by a star-shaped trash remover, a tine, two deflector discs and a tamping wheel. For improved ground contour adaptation and easier passage in stony conditions, all units have independent non-stop safety features. The tine is

The high speed, precision Kuhn Maxima 3 seed drill in action

also equipped with NSH safety with adjustable pressure ensuring a constant working depth. The inter-row cultivator is designed to increase soil structure, retain humidity and rain infiltration to minimise nutrient run off and increase traffic carrying capacity – an ideal tool to use prior to planting using RTK.

As well as offering targeted cultivation before drilling, the Striger also has the option to apply both granular and liquid fertiliser. There is also the option to incorporate slurry digestant within the cultivated row, decreasing overall production cost and encouraging fast plant growth.

Until 31 March 2019
most Kuhn farm machinery

products can be purchased with 0% finance, either 2+22 monthly payments or 1+2 annual payments. Call us now for details of this and other offers.

PROJECTS

INDOOR LAMMA SUCCESS

The first all-indoor LAMMA – UK's largest agriculture and machinery show – took place at the NEC in Birmingham on 8-9 January and was a great success.

Last year's LAMMA at the East of England Showground was cut short on day two due to severe stormy weather so the move to an indoor show at NEC was widely welcomed.

In Hall 7 the T H WHITE Projects team was ready for business on a spacious stand where graphic displays illustrated the Division's capabilities as it celebrates its 40th anniversary. A centrepiece of the display was the revolutionary dust suppression hopper, capable of minimising dust and consequent environmental and health hazards where free-flowing granular materials are handled.

As usual, public support for the show over the two days was commendable with thousands of visitors coming in to meet the 650-plus exhibitors. The Projects team enjoyed a very busy two days, welcoming clients and suppliers to the stand, discussing their on-site operations and requirements for a range of applications from servicing of equipment to a new drier, cleaner, right through to a new grain store.

Next year LAMMA will again be at the NEC on 7-8 January – dates for your diary.

Contact T H WHITE Projects on 01380 723040, or email projects@thwhite.co.uk.

KEEPING YOU SAFE & SECURE

Access Control systems

From simple pinpad and swipe units to fingerprint biometric entry modules we can control access to any size of property, including those with restricted areas or secure rooms.

Intruder Alarms

From bells only to fully policed, monitored systems. We can install the right system tailored to you or your insurance company's requirements. Already have a system? T H WHITE can carry out your annual tests, with a friendly face and a service you can trust.

Fire Alarms

Business owner? Landlord? Health and safety manager? Our surveyors are fully accredited in system design and can work with you on any project to make sure you comply with the latest regulations.

Fire Extinguishers

We supply and maintain fire fighting equipment, and offer advice to keep you safe and compliant with the latest regulations. We also offer safety signage and accessories such as cabinets, vehicle boxes and escape ladders.

CCTV & IP Cameras

For security, health and safety or machinery monitoring, we have the system for you. From fully HD conversions of existing systems to IP set ups we can future proof your CCTV installation. Coupled with our smart phone technologies you can monitor your system from anywhere in the world.

Electric Gates & Barriers

From bespoke domestic style electrical gates to commercial barriers and bollards. Physical security combined with security systems enhance the protection of sites and stop would-be intruders in their tracks.

ENERGY, FIRE & SECURITY

SCHOOL PROTECTED WITH MINIMUM DISRUPTION

T H WHITE Energy, Fire and Security was the proud winner of a competitive tender to carry out the installation of a completely new wireless addressable fire alarm system and to provide an ongoing service and maintenance contract.

Wireless was chosen over a wired system due to timescales and because this type of system causes relatively no installation intrusion to the building and therefore no disruption to any asbestos that may be present.

The installation not only provides protection to the pupils and school staff by giving them the earliest possible warning of a fire, but the design also offers the possibility of different alarm sounds for, say, a fire or emergency lockdown situation, all achieved through our EMS wireless addressable fire alarm panel.

The size of the site and the number of buildings presented quite a challenge, but a tight timescale was also imposed by the need to install and commission the system during the school holiday, also working around the activities of other contractors.

The systems were installed within the timescale set out at the start of the project with no major issues. Upon completion we carried out a full hand-over to the customer together with a training day to demonstrate how each of the systems could be used most effectively.

Lavington School has been most impressed with the service it received during the installation by T H WHITE. In addition to the wireless fire alarm installation, T H WHITE will now install and maintain a new emergency lighting system.

To find out all about the options for installing fire and security systems, why not take a look at our new website – efs.thwhite.co.uk – or if you have a specific project in mind talk to us on 01380 726656.

MACHINERY IMPORTS

CHIPPING FOR CHARITY

For the second year running Jensen woodchippers have supported a charity fundraising activity which to date has raised over £40,000.

Dorothy House, a charity which provides end of life care and support for patients with terminal illnesses across Wiltshire and North East Somerset, joined forces with Wiltshire College to operate a Christmas tree collection and recycling scheme. Volunteers collected more than 2,500 trees, 300 of which were delivered to the college's Lackham campus where a Jensen A540 woodchipper was on hand to reduce them for recycling.

With its powerful feed roller grip, wide hopper and 8-inch chipping capacity, the Jensen A440 made light work of even the bulkiest trees while students were able to learn safe techniques for chipper operation.

Phil Nicholls, gardener at Lackham, said: "We've filled almost two trailers with chippings now, all to be reused around the Lackham site. This is a great opportunity to help the charity and ensure that all of these trees have a chance to be recycled where they may have otherwise ended up in landfill."

Jensen UK Business Manager, Bill Johnston said "Not only are we assisting Dorothy House in their efforts to recycle the trees, but we are giving Lackham students valuable experience with woodchippers, also guaranteeing that the trees don't go to waste. Everybody wins!"

AGRICULTURE

"IT'S THE BEST BIT OF KIT I HAVE EVER BOUGHT!"

That's not something you often hear these days, but exactly what the owner of this Kawasaki Mule declared!

Following retirement from a career in National Hunt Racing, Ed Cookson returned to the Cotswolds last year to become a partner on the family farm near Bourton-on-the-Water.

Some of the farm's kit was getting old and after many years of owning an ATV, Ed decided that a UTV might be a more versatile replacement. He contacted Tim Rochfort at T H WHITE Toddington to arrange a demonstration of the Kawasaki diesel Mule Pro DX. He had already tried competing brands but found the Kawasaki Mule was better value and offered more space, both in the cab and in the rear bed. A deal was done!

Ed and his team said they couldn't be without it now. The Mule has become

Ed Cookson with his dog, Bengal, and his mule.

an essential piece of equipment for each working day, taking feed to the shoot hoppers, fencing work, moving jumps and towing – which he said it's particularly good at. Best of all he loves the frugal nature of the powerful Yanmar engine and the quiet, warm cab which keeps everyone dry and happy, including his dog Bengal.

Ed has just ordered and fitted a new Logic snowplough to the Mule... does he know something we don't?

If you are looking for the best purchase you could make do get in touch with our ATV/UTV specialists Tim Rochfort (07973 911934), or Simon Knight (07860 912763).
