## 72v HAULER PRO BRINGS IN THE PLANTS

**When you are producing more than 1.5 million plants a year and supplying top name garden centres across the UK, you need a thoroughly reliable system for gathering each diverse plant order from the nursery and bringing it to the distribution point for onward transport.**

At the Bransford Webbs Plant Company near Worcester a 24-acre site has been developed over many years since the 1940s, of which today over 10 acres is under glass with much of the rest covered by poly-tunnels. Plant orders often comprise hardy nursery stock from opposite ends of the site and in order to gather plants quickly and efficiently Bransford Webbs has been a long term operator of Cushman electric utility vehicles, or UTVs.

Financial Director Richard Colbourne explains: "Years ago we used to have some petrol powered UTVs and we have also used mini tractors from time to time, but even in the relatively large enclosed spaces of our greenhouses vehicle fumes can be very unpleasant for the workforce. So, back in 2005 we made the decision to use electric pick-ups for collecting plants around the nursery and we currently have a fleet of five.

"Earlier this year the oldest vehicle came up for replacement and we were keen to see whether the latest technological

developments could give us a vehicle that was even more efficient."

Luckily for Richard, T H WHITE's newly established Golf & Utility business – a sub-division of T H WHITE Groundcare – and its resident expert Simon Bingham were there to advise. "I knew that the 72-volt Cushman Hauler Pro would be a good solution for Bransford Webbs," says Simon. "The extra power compared to the earlier 48-volt models is ideal for trailer-hauling tasks in the nursery, and with a 50-mile range from one charge it has the capacity to work all day uninterrupted. You would be surprised at the distance it covers!

"As well as being economical to run, the Cushman Hauler Pro also features an enhanced controller unit which provides more finesse in controlling the machine's powerful acceleration – an important factor when hauling trailers. Other

advances include simpler diagnostics and battery state monitoring."

The verdict from Bransford Webbs? "The Cushman Hauler Pro is the plantsman's perfect pony!"

T H WHITE Golf & Utility can help you with a vast range of applications where there is a need for efficient, green and low cost haulage. To discuss the possibilities call Simon Bingham on 07813 835212, or email him at [sjb@thwhite.co.uk](mailto:sjb@thwhite.co.uk).

**AGRICULTURE**

**MANITOU ARTICULATED LOADERS AND SKID-STEERS**

The new Manitou MLA-T range of articulated loaders, previewed in the December 2018 issue of White's World and presented to customers at the LAMMA show in January, is now available from T H WHITE Agriculture with the top-spec model – the MLA-T 533-145 V+ offered until the end of April with a terrific 0% finance deal.

The MLA-T range comprises eight models perfectly tailored to agricultural handling needs, such as dairy cattle or beef farms. The tipping load varies from 875kg to 5 tonnes with a lifting height between 2.5m and 5.20m, and all models in the range are easy to manoeuvre with excellent 360-degree visibility.

The naming protocol is quite logical, the model name suffixes corresponding to the respective powers and types of transmission offered. All are highly capable machines, but for all-round power and capability the Manitou MLA-T 533-145 V+ takes the honours.

Combining comfort, performance and profitability, it is fitted with M-Vario Plus transmission, a 143 hp engine and a load sensing pump. With easy access to the main engine components and centrally positioned greasing points, maintenance is simple, optimising the profitability of your operation.

If you order a MLA-T 533-145 V+ from us and take delivery by 30 April you can take advantage of a 3+33 payment 0% finance deal, subject to a maximum advance of £50,000. If you are interested, please contact your nearest T H WHITE Agricultural branch where staff will be able to give you all the terms and conditions and arrange a demonstration if you wish.

Another Manitou star at LAMMA this year was the 2700V skid-steer representing a family of 16 compact loaders new to the UK. For many years the Mustang and Gehl brands have enjoyed a high profile in the USA and

Europe, having a reputation in skid-steer loaders going back to 1965. These machines are now being brought to the UK in Manitou's red and black colours.

The 2700V sits in the middle of the range boasting a lift capacity of 1.225 tonnes and a lift height of 3.31m, powered by a 72hp Yanmar diesel engine. The smallest skid-steer in the range is the 1350 R (lift capacity 0.612 tonnes; lift height 2.746m), while at the other end of the scale is the world's largest skid-steer, the 4200 V (1.906t; 3.647m) – powered by a 120hp Deutz engine.

With such a range of capabilities the Manitou skid-steers will have many applications across agriculture, construction and industry.

We understand that new machinery isn't the right choice for everyone so we are also offering deals on a selection of quality used Manitou equipment. Contact your T H WHITE Agricultural branch or local sales rep for full details.

PROJECTS

# ADDITIONAL STORAGE IN PORT EXPANSION

**The Port of Tilbury London Ltd, part of Forth Ports PLC, has now added a further 16,000 tonnes of cereal storage to its existing grain terminal on the banks of the River Thames.**

As one of the largest facilities of its kind in the UK, annually handling more than 1.4 million tonnes of combinable crops for both the import & export markets, this project represents a significant investment by The Port of Tilbury in one of its major assets which was originally constructed back in the sixties. The previous operating capacity – 120,000 tonnes of silo storage – has been augmented by a brand new flat store constructed adjacent to the existing grain terminal.

Principal contractor for the project was Colchester-based Cadman Construction, with T H WHITE Projects acting as the mechanical and electrical contractor, both parties working closely with the Port as principal designer for the new facility.

The 16,000 tonne flat store is contained in a 66m x 36m single span building with two main grain storage bunker areas surrounded by concrete retaining walls to a height of 6.5m, supported from the in-situ cast foundation which itself has the potential for the addition of future crop aeration.

At the front a below-ground

flush weighbridge was installed. At the rear of the building a MCC plant room was constructed to house the electrical control equipment in a clean, dust-free operating environment. This has a communications link with the main control room where the operating process control and monitoring software had been upgraded to encompass the enlarged facility.

T H WHITE heavy duty fabricated grain doors are used to maximise the available storage capacity, offering the ability to fill right up to the doors and protect the main entrance areas.

Alongside the existing concrete grain terminal, the mill gallery belt conveying system feeds the adjacent Allied & ADM flour mills which run in parallel to the Thames and the steel grain silos.

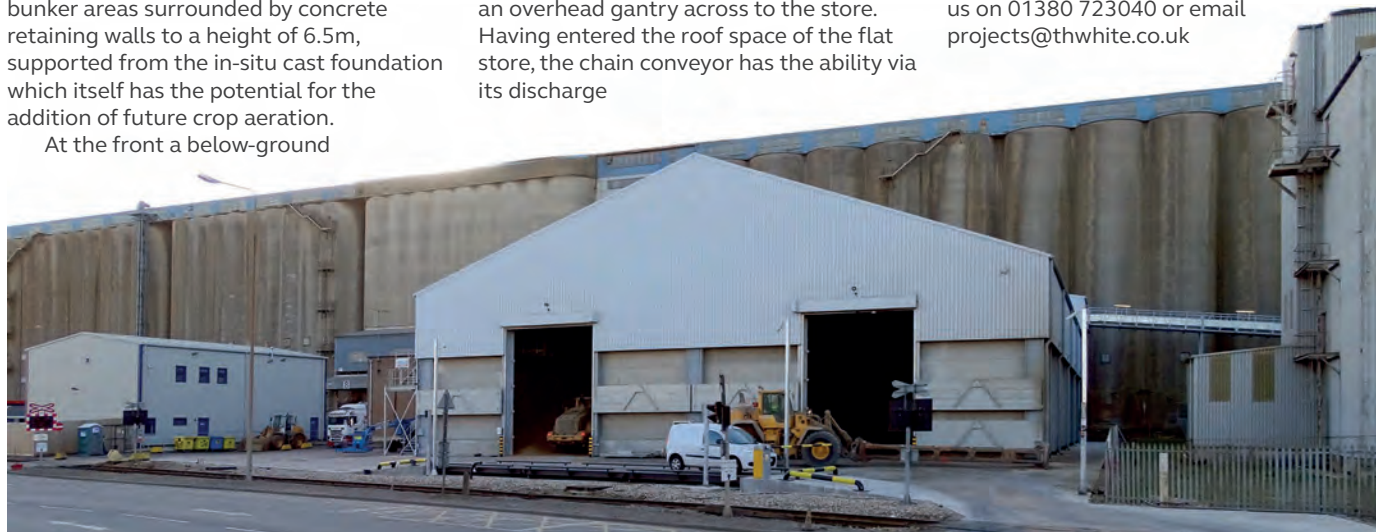

Apart from the option of tipping directly into the flat store by truck, the main automated feed route is via one of the mill gallery transfer towers which has been modified to divert the flow of grain down a reinforced chute with replaceable wear plates, into a new high capacity 500tph chain conveyor which runs in an overhead gantry across to the store. Having entered the roof space of the flat store, the chain conveyor has the ability via its discharge

slide gates to transfer the conveyed material into one of the two high level belt conveyors which operate down the length of the two storage bunkers, filling the area through the travelling tripper carriage on a controlled basis in conjunction with a festoon cable control system.

All mechanical and electrical equipment installed complied fully with the ATEX requirements of the project, whilst safe access for maintenance was ensured in the design of the secondary steelwork around the bulk materials handling equipment.

The project programme has now been successfully completed and handed to the Port for operational use, currently scheduled for final commissioning with the automated transfer of grain from the terminal by the time this appears in print.

T H WHITE Projects specialises in cereal processing and storage solutions of all sizes, from small farm installations to large commercial/industrial bulk facilities, taking each project from conception to completion. If you have a scheme you would like to talk about, please do contact us on 01380 723040 or email [projects@thwhite.co.uk](mailto:projects@thwhite.co.uk)

GOLF & UTILITY

# E-Z-GOES IT AT BOWOOD AS PREMIER CLUB CHOOSES LITHIUM TECHNOLOGY

**In January the PGA admitted Bowood Hotel Spa and Golf Resort as a PGA Golf Course and PGA Golf Academy – one of only three in the UK. As a result, Bowood will now also be the home of the English PGA Championship for the next three years.**

With credentials like that the stunning Wiltshire course is clearly setting very high standards. As well as its beautifully maintained acres, its spa and luxury 4 star hotel, it offers a superb golfing experience. Readers of the popular *Today's Golfer* magazine will also be familiar with Bowood's PGA golf pro Ben Emerson who is a regular columnist.

With the club's most exciting season to date coming up the decision was taken to renew the entire Bowood fleet of golf buggies and Ben was instrumental in opting for the latest E-Z-GO RXV ELITE lithium battery vehicles. "Not only are the new buggies 126 kilos lighter – that's more than equal to the weight of a person – but they are maintenance-free," said Ben. "They go much further on a charge too, being able to go round the 18-hole course twice compared to once with our old buggies."

The fleet of 16 RXV ELITE buggies was delivered to Bowood in early March after Stuart Fry from T H WHITE gave Ben a demonstration. "Unlike traditional lead-acid batteries the lightweight lithium pack needs no topping up or other maintenance and is faster to charge," said Stuart.

Out on the course the new buggies have already proved a hit. "The players love them, while they also result in less ground compaction," Ben added.

Although the advanced Samsung lithium battery technology means that

the new RXV ELITE costs more than buggies with traditional batteries, the extra range means that they can be used more intensively, thus reducing the number of buggies needed, the club now having been able to reduce its peak time fleet from 20 to 16. They use less power too, cutting running costs.

**Bowood PGA Pro Ben Emerson (left) and Stuart Fry from T H WHITE.**

Residual values are also higher, meaning that a club like Bowood, which leases its buggies – usually over a four year term – can almost achieve a cost-neutral outcome. E-Z-GO also covers the ELITE series with an unprecedented five-year, unlimited-amp-hour warranty.

Bowood's blossoming reputation is unsurprisingly attracting blue-chip companies for corporate events. "We have a couple coming up this year besides the PGA Championship, including one for Aston Martin, and that's another area where T H WHITE helps us," says Ben. "For these events we often need extra buggies on a short term basis and T H WHITE is able to hire us whatever we need. It gives us great flexibility to accommodate events of any size."

If you would like to know more about the E-Z-GO RXV ELITE or other E-Z-GO golf buggies please contact Stuart Fry on 07774 212926 or Simon Bingham on 07813 835212.

# HIGH QUALITY CLEARANCE BARGAINS

On the opposite page is our usual monthly selection of some of the best used agricultural equipment on the market. But on this page we present a selection of clearance items at bargain prices.

This selection of products may be ex-display, ex-demonstrators, or simply items that we have had in

store for a longer period. As a result, some items may exhibit storage soiling or show signs of light use, but without exception they are high quality machines and implements.

All items will be fully checked by our technicians as well as being warranted by T H WHITE.

**HE-VA FRONT PRESS**

Running a front mounted press ahead of a combination drill might look old school to some, but why have a dead weight on the front of your tractor to counterbalance your drill when, with a front press, you will not only speed up the drilling operation but also level, cultivate and consolidate ahead of your combi drill? This is exactly what the range of HE-VA front presses has been designed to do. Cleverly, the long headstock has been engineered to 'pull' not 'push' the press in work. With steering rollers in the headstock it allows the press to follow the tractor accurately, essential when using a steering guidance system. The press then automatically centres itself when lifted at the headland for increased stability while making a headland turn and in transport.

**ACCREDITED SPECIALISTS IN ENERGY, FIRE & SECURITY DESIGN, INSTALLATION, SERVICE AND MONITORING**

**SECURITY**

T H WHITE Energy, Fire & Security is an NSI Gold-accredited Intruder and Security specialist with 26 years' experience in installing and maintaining commercial security systems. Our carefully chosen suppliers are **Honeywell, Risco, Texcom, and Visonic** and we supply and install panels, detectors, PIRs, key fobs, keypads, as well as a range of wireless communication warnings and controls.

**FIRE SAFETY SYSTEMS**

T H WHITE is an approved **Gent 24 System Integrator**, specialising in design, supply and installation of Gent fire systems from **Honeywell**. We also supply and install farm alarms and associated accessories from **Advanced, Haes, Kentec, EMS, Hochiki and Apollo**. We work with clients to provide single standalone alarms or fully integrated solutions, as well as secondary solutions such as fire extinguishers.

**EV CHARGEPOINTS**

Working with leading supplier **Evolt (Swarco)**, we offer a full range of electric vehicle charge points, from simple residential installations to fast and rapid charge points for commercial use. We are also registered to offer OLEV grant funding to homeowners and businesses for each qualifying charge point installed.

**SOLAR ENERGY & STORAGE**

We have a strong pedigree in Solar PV having installed over 300 commercial schemes totalling 18 Mega Watts from commercial rooftop solar systems and small solar parks. We choose to install **Hanwha Q Cells** well as market leading **SMA, Fronius and SolarEdge** inverters. For energy storage we are now installing the Powerwall 2 battery from **Tesla**.

**Servicing and monitoring contracts available across the range Call us today for a free, no obligation survey**

**10% OFF YOUR FIRST SERVICE BOOKING**

for any new or existing customer who takes on service and maintenance from a new department. For example, if you have an energy service contract and take out fire alarms servicing, then the discount would apply to your first booking of the new work.
