

## Spider on the web with new site for UK customers

[www.spidermower.co.uk](http://www.spidermower.co.uk)

The team behind the distribution of Spider slope mowers in the UK are delighted to launch a new website dedicated to showcasing the unique range of Spider mowers available to industry professionals across the country.

The new, user-friendly website enables users to view details on all the Spider machines available to the UK market and learn more about the benefits of using a Spider on dangerous, challenging or steep terrain.

Not only that, booking a free, on-site demonstration has been made easy with an online form available on every page which sends your request straight through to the team for a quick response.

Alternatively, for those who prefer to talk on the phone, you can call and speak to a Spider representative right here in the UK with contact numbers available for the team.

For those seeking to contact their nearest Spider dealer, the 'Find a Dealer' page provides addresses and telephone details for each of the UK dealers, a list which will continue to grow with new dealers sought to increase support and sales coverage for customers in new areas.

Bill Johnston, Head of the UK Spider distributor business Machinery Imports, is excited by the new digital presence, commenting:

"The new UK based website for Spider creates a hugely useful resource for Spider owners, dealers and customers looking for a suitable slope mower. Home to a wealth of information about the brand and the specific models available, as well as current and former user manuals, the website will be an asset to our business in promoting the benefits of Spider mowers for customers across the country."

Spider was founded in July 2004 by Lubomír Dvořák in Czech Republic. The patent-protected remote-controlled slope mowers feature a revolutionary design incorporating a unique drive system offering 4-wheel drive, skid steer, and zero-turn functionality.

Unrivalled in the field, this functionality makes Spider mowers quick and easy to manoeuvre, able to climb slopes up to 55° and lightweight, avoiding turf damage and erosion.

The launch of the newest and smallest Spider, the X-Liner, sees all the benefits of the larger Spider mowers in a compact, approximately 1m<sup>2</sup> model, capable of mowing up to 3000m<sup>2</sup> per hour!

The Spider brand in the UK has seen great success over the past year under Machinery Imports stewardship and the development of a new UK-based website will support the business' focus on further increasing visibility within the UK market along with helping existing Spider owners to find their local dealer for sales and service support, and encouraging new dealers interested in representing the brand to make contact.
