PALFINGER UK
PART OF T H WHITE GROUP

BARRIER RIGS FOR AMEY CONTRACT

Palfinger UK – part of T H WHITE Group – has participated with leading infrastructure support service provider Amey and Mercedes Benz truck dealer Rygor Commercial to deliver two multi-purpose barrier rig vehicles as part of a 15 vehicle order, all but one of which are being supplied under a multi-million pound Highways England maintenance and response contract for the north west.

The vehicles will be used on routine maintenance, defect repairs, emergency incident responses and severe weather services over 420 km of motorways and 80 km of A roads in Greater Manchester, Merseyside, Cheshire and South Lancashire.

Built on Mercedes-Benz low-entry Eonic 18-tonne chassis, the barrier rigs are fitted with Palfinger PK19.001A SLD 5 cranes which combine a high power lifting system with an intelligent light-weight design, with a maximum lifting capacity of 6,200kg with a maximum hydraulic outreach of 8.1m. Further augmenting the rig's capability is an Orteco HD 800 truck-mounted pile driver which has a hydraulic rotation system enabling operation from either side of the vehicle, as well as the ability to deliver 680 blows per minute with a 1,060 joule hammer. Devizes-based Palfinger UK has a long-standing association with Amey

and undertook both the crane installation and the specialist body-building of the barrier rigs which incorporate a wealth of safety features.

The Mercedes-Benz Eonic chassis are 1827L models with 7.7-litre in-line six-cylinder engines producing 200 kW (272 hp). These are paired with 12-speed Mercedes PowerShift 3 automated manual transmissions. Full air suspension is combined with Active Brake Assist 4 emergency braking technology. Programmed to recognise other vehicles at higher speeds, as well as pedestrians when moving more slowly, this is capable of bringing it to a complete stop. Single step access and a predominantly flat floor makes for easy cross-cab access, enhancing safety for operatives who may be in and out of the vehicle many times in a working day by encouraging them always to use the safest side.

In building the barrier rig bodies and equipping the vehicles with cranes, Palfinger UK worked with Rygor Fleet Sales Manager Jeremy Price to ensure the finished specification met all Amey's requirements.

If you have an application that requires a vehicle fitted with a crane and/or specialist bodywork, Palfinger UK can help to guide you through the many options to achieve the perfect solution.

Call us on 01380 733513, or visit palfinger.co.uk.

Built on a Mercedes-Benz Eonic 18-tonne chassis, the barrier rigs have been fitted with Palfinger PK190001.SLD5 cranes and Orteco HD 800 pile drivers.

COVID-19 UPDATE

As restrictions resulting from the COVID-19 pandemic are eased in the UK we are increasingly able to resume services across our businesses. It's a fast-moving situation, so for the latest updates from each of our divisions please visit thwhite.co.uk/coronavirus.

ENERGY, FIRE & SECURITY

SERVICE THAT WILL KEEP YOU SAFE AND SAVE MONEY

In today's tough trading climate it's more important than ever to have efficient protection for the people and premises in your business.

Reliable fire safety and security equipment is a must, but regular servicing is also vital to ensure it operates correctly at the crucial moment when it's most needed. In fact, many insurers will require systems to be serviced and maintained with a certified provider in order to maintain the validity of insurance cover.

That said, we know that the costs of running a business are particularly challenging right now, so at T H WHITE Energy, Fire & Security we aim to

provide the highest quality, comprehensive service, saving you money at the same time.

We have built a reputation as a trusted after-sales specialist in all aspects of fire & security maintenance and servicing, with **NSI GOLD** accreditation. Unlike many service providers, we don't sub-contract, so all our experienced and qualified engineers are in-house, benefitting from regular development and training.

As well as core technologies such as fire and intruder alarms, we are also specialists on testing and maintenance of fire extinguishers, CCTV, access control, door entry systems and emergency lighting.

Electrical contracting forms an important part of our capability too and alongside installation and maintenance we offer complete electrical design services.

Scheduled servicing can reduce the risk of potential faults, identifying and repairing existing faults before they

become a problem to help you avoid unnecessary call out charges.

By using a single company to maintain all your fire safety and security equipment you can eliminate duplication of attendance charges. All your servicing can be carried out in one visit by the same engineer and having a single account manager means you always deal with a person who is familiar with your business and who understands your needs.

We are confident that we can do this and save money for you too – so confident in fact that we will guarantee a **10% SAVING** on your current fire and security servicing costs*. And that's a small price to pay for total peace of mind that you have a working, compliant system, that is protecting you, your staff and property.

*Terms & conditions apply – contact us for details.

40% discount on solar PV service

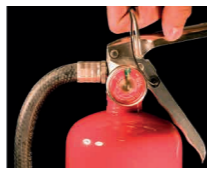

As we come into the peak power generation season we are delighted to be able to offer a **40% DISCOUNT** on an annual solar PV service for new clients. The annual service involves extensive checks and measurements but typically includes:

- String tests using a calibrated testing device
- Checking all cabling, routing and condition
- Operation of all AC & DC isolators in turn to check functioning
- Check inverters
- Clean inverter filters
- Check inverter screen(s) to ensure the expected generation – using a solar irradiation meter.

Solar PV servicing with 40% discount

System size	Usual price	40% discount
10-30kWp	£292	£175
30-100kWp	£375	£225
100-250kWp	£442	£265
Above 250kWp	POA	POA

These prices are ex-VAT and based on 50 miles/1.5 hour drive time from Devizes. We will happily quote on distances beyond this and sites local to Devizes may incur further discount. Examples above relate to commercial PV systems. We also offer PV servicing for residential properties and monitoring contracts plus great deals on PV cleaning deals. **Call us for details on 01380 726656.**

DAIRY

Despite many inevitable challenges presented by the coronavirus lockdown, the new dairy unit that will play a key part in training students for a new undergraduate Dairy Engineering qualification is taking shape rapidly.

The course is being offered by Wiltshire College & University Centre and will be based at the Lackham campus near Chippenham. T H WHITE is partnering with the College in construction of a state-of-art extension to the dairy unit featuring two of the latest DeLaval VMS V300 robotic milking units, an advanced Bauer slurry control system plus a day/night LED lighting system. The complete project will benefit from industry-leading DeLaval software.

Lackham's course, which will be supported going forward by T H WHITE with continuing input and resources, is designed to address the skills gap in the dairy sector. Focusing on the remarkable technological advances in dairying which have given us advanced robotic milking and precision herd management to a standard that simply didn't exist only a few years ago, the course will give students a firm grounding in the latest developments, allied to a strong career advantage in this fast-changing area of farming.

T H WHITE is acting as project manager for the new build, working closely with the College management team at Lackham and the main contractor, Haines Construction (Southern) Ltd. Our 'man on the ground' Mike Howes charts the progress so far: "There were

some delays at the start," he says, "as we were not permitted to demolish a few old buildings on site until planning consent had been granted for the new building. Then we had to implement some careful management of the water table during the extremely wet weather in February. "When the virus broke out and demand in the construction sector tailed

off, we were able to take advantage of the availability of steel and galvanising services to get all the necessary materials on site."

These photos, taken on 25 June, show the structural steel work in place and blockwork for the VMS milking stations and classrooms in progress. "We were about three weeks behind schedule after the lockdown," Mike added, "but we've now recovered at least two of those. We are still aiming to have cows in by September, with the building ready for students by October."

T H WHITE managing director Alex Scott has played a key role in bringing the project to fruition. "Considering the challenges that have already been thrown at us in 2020, I am delighted that we have managed to keep the project on track," he said. "The performance of the whole team in making it happen has been most impressive."

Amanda Burnside, principal of Wiltshire College & University Centre, Lackham, said "The progress on this wonderful new facility has been remarkable. We are confident that the new course starting this autumn will offer students many first class career opportunities and we look forward to welcoming them."

To learn more about the Lackham Dairy Engineering Course, or to apply for a place starting this September, go to www.wiltshire.ac.uk. Applications are now open and there is a helpful FAQ section on the website to guide you through the process.

Top and above: The steel frame of the new dairy unit on the Lackham campus was well advanced in June.

Below: Inside the building the slurry channel, as well as block walls for the VMS units and teaching spaces take shape.

HIGH DENSITY BALING FOR MORE PROFIT

A 22 per cent increase in bale density, a 29-knife CropCutter™ system and the unique SmartShift™ gearbox – winner of the Agritechnica silver medal – make New Holland's BigBaler 1290 High Density the most efficient large square baler in its segment.

Denser bales significantly reduce transport and handling costs, increasing profitability. The new MaxiSweep™ pick-up feeds crop into the large 4.05-metre baling chamber at higher rates, where the high-energy plunger achieves as much as 58 per cent more force than previous 'Plus' baler models. Because the compression process is controlled by a clever hydraulic system full bale density is achieved within the first bales, even when starting up with an empty bale chamber.

The SmartShift™ gearbox delivers a soft start-up, contributing to greater operator comfort as well as overload protection for the tractor's driveline. Smooth operation is also enhanced by a heavy 1080mm diameter flywheel which

maintains a maximum flywheel speed of 1,440 rpm at full tractor PTO speed.

Patented Loop Master™ knotting technology uses a loop-style second knot to deliver up to 26 per cent more tensile strength – best-in-class solid binding which produces plastic-free forage and protects the environment by eliminating twine offcuts.

The 2.35-metre MaxiSweep™ pick-up is perfect for the widest swaths left by today's high-capacity combines, making the BigBaler 1290 High Density ideal for large scale farming where there is a lot of ground to cover, or for contracting. The new baler too with a heavy-duty frame designed to manage higher density loads and a new gearbox mounting. The low cost of ownership resulting from a long life, plus increased productivity and efficiency means greater profitability.

To find out more, contact any of the T H WHITE Agriculture branches listed on page 2. You can also request a demo online at www.thwhiteagriculture.co.uk/get-in-touch.

RB125: COMPACT AND RELIABLE

Steve Dixon is typical of the smaller-scale farmer who prefers to carry out his own baling when it suits him without relying on a contractor or anyone else.

He farms 80-plus acres of grassland and last season he purchased a New Holland Roll Baler RB125 from Will Farr at our Hereford branch.

Steve has made good use of his new roll baler from day one, and it has impressed him on a number of levels, starting with its performance: "It's much faster than my older baler and the mechanical design is excellent," he says.

Since purchasing the baler Steve has produced 1,600 bales; 1,000 for himself and a further 600 contracting. Working in very wet conditions baling silage, hay and straw. "The RB125 was easily achieving 55 bales plus to the hour and even in poor conditions it was achieving 20 bales to an acre in wet grass. It just ate it up!"

In terms of bale production, Steve has been impressed by both the shape and density of the round bales. "The RB125 makes a tremendous bale, even when it's not on full density. It packs it in very well and there is good cover right over the edge of the bale." Steve has also benefitted from the option to select 20 knives: "I feed a lot of animals by hand and the smaller forage size makes it easier to feed."

The RB125 has also proved simple to use. Steve admits that he is not computer savvy, but he has found the IntelliView IV monitor both user-friendly and easy to understand. The pick-up has also worked well for Steve, with no jamming like so many other balers. "It's a very capable baler which has kept me going right through the season on all conditions" says Steve. "Another benefit has been the auto lube system which keeps maintenance requirements very low."

Ask your Agriculture rep about New Holland round balers TODAY!

GOLF & UTILITY

THE SMART WAY TO PLAY A ROUND

As golf courses around the country re-open, the savvy ones will be looking at ways make more of their money in these uncertain times, at the same time enhancing their offering to players.

Top choice for style, economy and power efficiency, with less 'out-of-the-wall' power consumption and the lowest total cost of ownership, the E-Z-GO ELITE series of lithium battery-powered vehicles is in a class of its own. In fact, in a survey of more than 80,000 golf cars at over 1,350 courses worldwide, no other golf car came close to the power, efficiency, and cost savings of an ELITE vehicle. Not only do ELITE cars use half as much electricity as conventional lead/acid powered cars, but there's also no need to wait for a full charge to get your ELITE car back on course with reliable power that will not fade at the end of the day. After 36 holes, it will still have enough power to play another round.

Thanks to the lithium battery, ELITE cars are around 250 lbs lighter than other electric golf cars, impacting less on the turf and less money spent on ground repairs. The cost of upgrading can soon be recovered through significant savings on electricity bills. Taken in the round, lithium ELITE golf cars offer the lowest annual cost of operation.

Contact any Groundcare branch for details or to arrange a demo.

AGRICULTURE

PRE-HARVEST PRECAUTION

The prospect of long hours harvesting just around the corner means that the one thing you really need to rely on is your combine harvester.

Like any complex piece of machinery, a combine harvester needs professional maintenance – more so as it is suddenly pressed into a period of intensive use. A pre-harvest combine check and service can go a long way to help avoid an unwelcome breakdown plus heartache and expense in the middle of the busy season. Talk to your local rep or any T H WHITE Service Workshop for details of combine servicing and to book your machine in.

AGRICULTURE

SKY DRILL PROVES ITS CAPABILITIES

At the end of May we undertook some impressive drilling near Toddington, Glos, with our 6m SKY Agriculture Easy Drill Demonstrator powered by a New Holland Agriculture T7 tractor.

Our Sky Easy Drill is specifically designed as a no-till drill but works equally well in minimum tillage conditions, on consolidated ploughed soil and when drilling into cover crops.

This particular drill has three hoppers allowing three different products to be drilled at two different depths. Individual coulter selection, choice of seed spacing and alternative seed distribution are all controllable from the cab and the 3.5 degrees coulter angle dramatically reduces soil disturbance retaining as much moisture as possible in establishment.

With 250kg of coulter pressure, this drill more than lives up to its direct drill nature and speed and accuracy is better than ever!

Missed the demo? No worries – you can book your own demo now to see just what it can do on your own farm. Call your T H WHITE local rep or request a demo online at www.thwhiteagriculture.co.uk/get-in-touch.

FRESHEN UP THE HARDEST WORKER IN YOUR BARN!

Research has shown that regular use of the DeLaval swinging cow brush

OFFER PRICE £100 +VAT

can lead to a significant reduction in clinical mastitis and up to one litre more milk per cow per day. As a swinging cow brush is pretty much in use around the clock, its bristles - just as with any brush that is used on a daily basis - become worn and less effective over time. Replacing the DeLaval swinging cow brush cylinder helps keep your cows clean, calm, healthy and productive. Therefore, we strongly recommend that you freshen-up your brush on an annual basis by replacing the head.

You or your T H WHITE technician can simply replace the head in a matter of minutes.

TIME TO CHECK AND UPDATE YOUR FENCING

Whether you need a permanent fence or temporary fence, DeLaval has a wide range of products to match your needs. DeLaval plastic posts are made from a durable material and have several fixed insulators. The foot has a spike for driving into the ground. DeLaval Polywire offers a cost-effective solution with copper conductor strands for excellent conductivity. This long-life wire is available in orange, white or blue.

You will need the right insulators to make your fencing safe and durable, regardless of whether you are using permanent or temporary fences, or are using wire, rope or tape. DeLaval insulators are suitable for wire or rope up to 4mm and are supplied in quantities of 100 pieces, DeLaval parts and accessories are available from our Dairy departments in Frome and Huntley. Offers are valid until 31 August 2020.

4 YEARS OR 4,000 HOURS OF SERVICE PLUS COVER!*

ON IN-STOCK NEW HOLLAND T6 4-CYLINDER TRACTORS

The New Holland T6 is packed full of features to satisfy even the most demanding users. Combining luxurious comfort with outstanding fuel efficiency, the T6 features a cab with commanding visibility which is also the quietest in the business.

* Service Plus cover is subject to a £150 contribution per claim.

NEW HOLLAND AGRICULTURE

T H WHITE AGRICULTURE

PROTECT YOUR PEOPLE & PREMISES SAVE 10%* ON YOUR CURRENT FIRE AND SECURITY COSTS BY SWITCHING TO T H WHITE.

We know that even with the best intentions it's not always easy to keep on top of maintenance, so T H WHITE has a great offer to address ALL your fire and security service needs, saving you money at the same time. **We are offering 10% OFF* existing annual fees from any other supplier for fire & security servicing contracts, including extinguishers.**

OR ADD A NEW TECHNOLOGY TO YOUR EXISTING SERVICE CONTRACT WITH US AND RECEIVE 10% OFF ANY EXTENSION. If you already have a service contract with us and you add a new technology, we'll reduce the cost of that extension by 10%. So, if we currently service your alarm system, you could add fire equipment, or vice versa. Or, perhaps, add CCTV or door access...

To find out how to claim your 10% discount call 01380 726656, email clc@thwhite.co.uk quoting 'Discount 10' or complete the online form at efs.thwhite.co.uk/contact

*Terms & conditions: To qualify customers will need to provide evidence of annual contract charges or 12 months of invoices from their current supplier. The discount offer is also open to existing T H WHITE customers taking on a new technology with us. For example, if we currently service your fire alarm and you wish to add CCTV or Door Access. We reserve the right to decline a service contract subject to survey.

MACHINERY IMPORTS

GEARING UP FOR THAT IMPORTANT FIRST CUT

FERRIS FM35

Unsurprisingly during lockdown, many public grounds and other areas have become quite overgrown and are still awaiting their first cut.

The **Ferris FM35** walk-behind 48" flail mower is the perfect machine to tackle these unkempt areas. Designed to combat the most demanding environments, the FM35 is ideal for mowing rough and overgrown areas, featuring strong, welded steel construction and housing a robust 122cm flail rotor with 34 independent flail blades which deliver a highly efficient cut.

This efficient flail mower is designed to excel in a wide range of applications including landscaping, agriculture, utility, maintenance, construction sites, road right-of ways, trails, and all other areas needing brush or overgrown area control.

Cut, mulch and spread, leaving a fine finish, with the FM35 walk-behind flail mower.

Where space is tight, the new **Ferris FW15** variable hydrostatic walk-behind provides a narrow footprint for trimming around trees and planter beds. Manoeuvrable and easy to operate, this mower is already becoming a firm favourite with landscapers across the country.

The FW15 can be operated comfortably with one hand, with adjustable speed control and handlebars with 4-position set up for complete operator comfort. Its compact 32" reinforced steel deck comes with dual timed cutting blades and spring assisted height of cut adjustment lever for quick and simple height change.

To find your Ferris mower dealer go to ferrismowers.co.uk where you can also get the full spec on all Ferris machines and you can also arrange a demo.

FERRIS FW15

AGRICULTURE

NOW MERGE MAXX 760 AND 1090

In the June issue of White's World we turned the spotlight on the acclaimed Kuhn Merge Maxx 950. Now Kuhn has extended its swather range with the addition of a larger Merge Maxx 1090 model, and a smaller 760 model.

Both the new models will be available from the beginning of September and, like the 950, they lay the swath to the left, right and in the centre (selectable on the move). The pick-up with cam track and the leading crop press roller ensure uniform swaths.

The 760 model groups 5.50 metres of

work into one side swath and 7.50 metres into a central swath. The top 1090 model gathers 11 metres of work into a central swath and more than 8.80 metres into a side swath. Pick-up and swath width can be adjusted to suit the quantity and type of forage material being harvested, thus enabling the number of passes and associated costs to be reduced. For lateral swaths, the width can be varied between 1.00 and 1.50m. For central swaths, it can be up to 2.20m in width.

Auto-regulating rollers at the front

and side of the pick-up unit self-adjust their position according to crop thickness. These in turn pass a consistent and constant supply of forage to the merger belts, thus allowing a uniform, airy and faster-drying swath which makes it easier for the subsequent baler or chopper to collect large volumes of grass. For forage harvesters this can equate to a 2-3 km/h increase in forward operating speed.

A variety of forage types can be handled including the most delicate crops, always preserving the full nutritional value of the harvest. Compared to a conventional grass rake, the Merge Maxx offers an increase in working rate, with the greatest time savings to be made when handling wet or heavier forage crops.

The pick-up unit is guided by two large articulated skids mounted near the pick-up. Their large surface area and effective suspension reduce the weight on the ground, thus protecting the plant cover. By adapting to the terrain they minimise uptake of debris, ensuring good forage quality and less time and money spent on replacing blades and other working parts on the forage harvester or baler.

To learn more about the Kuhn Merge Maxx range or to request a demo please contact your T H WHITE rep or visit www.thwhiteagriculture.co.uk.

DON'T MISS OUT ON YOUR DEMO!

We are experiencing high demand for demo sessions with our 2020 fleet of agricultural machinery so be sure to book your demonstration as soon as possible to avoid disappointment. To request a demo call our Agriculture demonstrator Mike Quilter on **07887 450200** or request a demo online at thwhiteagriculture.co.uk/get-in-touch

† Excludes all shredders, GMD mowers, drum mowers, haybobs, power tillers, amenity products, salt & sand spreaders, Gyrotedder models up to GF 6502 and Gyrorake models up to GA 5031. For large square balers, contact KUHN UK.

AGRICULTURE

POWER TO YOUR PADDOCKS!

Keeping your paddocks looking tidy and weed-free at this time of year can be a challenge and finding someone available to do the work for you, even more so. Investing in your own machinery gives you the freedom and independence to carry out your own maintenance – at a time that suits you. Here's a small selection of essential products from Logic and Honda that are a joy to operate, as well as being reliable and effective.

Logic TRM150/120 Rotary mowers: Choose from the wide 1.5m or 1.2m cut and 13hp or 16hp engines. These capable toppers will power through long grass and weeds leaving a wonderfully neat and tidy finish. We recommend the easy-to-use electric start versions, with adjustable 20mm to 160mm height control and drawbar offset feature. For safety, a cut-out lanyard stops the engine in an instant and the TRM can be towed by an ATV, compact tractor, UTV or 4x4.

Logic MFP Flail mowers: For fast and effective cutting of rough grass, weeds, brambles, maize and woodland, there is no better machine than the Logic flail mower. High speed rotary flails will relentlessly cut through overgrowth as well as being able to cut short paddock grass. Featuring a height adjuster, drawbar offset and safety cut out lanyard, you can choose from 16 to 18hp Engine sizes, 1m to 1.2m cutting widths and three types of flail to match your conditions.

The TRX520FA6 Foreman is Honda's flagship ATV, incorporating every feature you could wish for. Powerful liquid cooled engine, 2/4wd and difflock, power steering, independent suspension, disc brakes, hi and lo range and fully automatic transmission with unique push button gearshift control. All backed by a 2 year warranty and Optional Free GPS tracker.

Logic OBS sprayer: No need to lug a Knapsack around when you can spray from your ATV with the rear rack mounted OBS640. It fits in seconds and the powerful 12v pump provides pressure to a 10m hose and hand lance. The operator can choose from a 1.5 or 2m adjustable spray boom with up to 6 nozzles.

WELCOME MARTIN

Martin Payne has joined T H WHITE Agriculture at the Frome branch as New Holland Sales Representative, replacing Joe Woolley. Martin will represent the New Holland brand, together

with our associated franchises (Manitou, Kuhn, Väderstad, Heva Opico and McConnel).

Martin, who comes from a family farming background and has always had a passion for Agricultural Machinery, brings valuable previous industry experience to the Frome business having most recently been Area Sales Manager for ARGO Tractors UK (McCormick) covering Southern England. Before that Martin spent 10 years as a sales representative for Redlynch Agricultural Engineering with brands such as Fendt, Valtra, Kramer and Lemken.

Martin is looking forward to making contact and meeting (safely!) existing and new customers in the coming months. "I believe the best outcomes result from a proper understanding of each farmer's business," he says. "I'll be doing my best to achieve that in order to provide the best possible customer support."

"I also like to be hands-on as much as possible, especially in providing machinery demonstrations. There's nothing like being able to show a customer first hand just how some of the latest machinery can make their business so much more successful."

Outside work Martin enjoys family life. He is married to wife Michelle with daughter Olivia 12 and son William 14, who is studying hard to pursue a career in agriculture and farm management. Martin has a lifelong passion for country life and pursuits, spending time walking and training the new family member – an energetic working cocker spaniel – clay shooting with son William and helping daughter Olivia with her horse.

HARVEST BREAKDOWN & SERVICE

There's enough to think about at harvest time without worrying whether your equipment is going to let you down.

T H WHITE Projects can help with regular servicing and maintenance of driers, cleaners, conveyors,

augers and elevators to ensure they are ready for the busy period. We can supply and fit parts for most makes of equipment, new or old.

If you do suffer a breakdown we can be on the spot fast to get you back in action. Just call our hotline.

Harvest emergency hotline (24/7): 07919 394602
